## A

Absorption coefficients for dissolved gases, 190, 191, 202  
Absorption of radiation (*see* Radiation)  
Abyssal-benthic zone, 277  
  animals of, 805-810  
Accessory growth factors, 769  
Adaptations to planktonic existence, 764-766, 821-823  
Adiabatic temperature distribution, Mindanao Trench, 739  
Adiabatic temperature gradient, 63, 64  
Advection, definition of, 157  
Agulhas Stream, 696  
Air-borne material in sediments, 955  
Aleutian Current, 722, 723  
Algae:  
  benthic, distribution of, 290, 291, 293, 295, 782  
  blue-green, 288-290  
  brown, 291-294  
  coralline, 290, 295, 855  
  green, 290-291  
  red, 294-295  
  yellow-green, 295-302  
Alkalinity, 195-198  
  distribution, 208-210  
  relation to calcium carbonate content, 1000, 1001  
Allogenic minerals in sediments, 987  
Alternation of generations:  
  animals, 306, 319-320  
  plants, 290, 292, 294  
Aluminum, 182  
Ammonia:  
  distribution in oceans, 243, 244  
  produced on sea bottom, 995  
  role in nitrogen cycle, 256, 257  
  seasonal variation, 252, 253  
Amphidromic point, 557, 558  
Anchoring, in deep sea, 361, 362  
Angular velocity of earth's rotation, 433  
Animal exclusion, hypothesis of, 900  
Animal population, 303  
  diversity of, 282

Animal population (*Cont.*):  
  ecological groups:  
    benthos, 280, 800  
    nekton, 281, 810  
    zooplankton, 281, 812  
  synopsis of, 304-314  
Animals and the environmental factors, 823-873  
  light, 824  
    color correlations, 824-830  
    structural correlations, 830-833  
    vertical migrations, 835-839  
ocean currents, 858-869  
  dispersal by, 858  
  maintenance of endemic population by, 863-865  
  oxygen, 869  
    anaerobic conditions, 871  
    consumption of, 852, 853, 870, 873  
  salinity, 839-843  
    a selective agency, 840  
    euryhalinity, 840  
    size and, 842  
    stenohalinity, 839  
  temperature, 843-858  
    effect of freezing, 844  
    influence on calcium precipitation, 853  
    influence on geographic distribution, 845, 849, 851  
    influence on metabolism, 852  
    influence on reproduction, 845-849, 857  
    influence on size, 855-857  
    influence on speciation, 867-869  
Annelida:  
  reproduction, 321  
  synopsis, 308  
Antarctic Circumpolar Current, 613-621  
Antarctic Circumpolar Water, 607, 610-611  
  renewal, 620  
Antarctic Convergence, 139  
  biology of, 809, 941, 942  
  formation, 618  
  location, 606, 607

- Antarctic Intermediate Water, 139, 608  
 formation, 619  
 Indian Ocean, 691, 692, 697  
 North Atlantic, 670, 685, 686  
 South Atlantic, 626, 627, 629  
 South Pacific, 699-701  
 spreading of, 139, 744, 745
- Antarctic Ocean:  
 bottom topography, 32  
 currents, 613-621  
 oxygen distribution, 621-623  
 water masses, 605-613
- Antilles Current, 672, 675
- Aragonite, 998, 1027
- Arctic Intermediate Water:  
 North Atlantic, 670, 685, 686  
 Pacific, 717, 718  
 formation, 722  
 spreading, 745
- Arctic plankton, 856, 868
- Argon, 189
- Arsenic, 183
- Arthropoda:  
 reproduction, 322-324  
 synopsis, 309
- Artificial sea water, 185, 186
- Ascendant, definition of, 156
- Associations of organisms, 880-882  
 commensalism, 881  
 environmental associations, 880  
 parasitism, 882  
 symbiosis, 881
- Atlantic Ocean (*see also* North Atlantic  
*and* South Atlantic):  
 boundaries, 11  
 equatorial region, 631-637  
 currents, 632-637  
 water masses, 631, 632  
 oxygen distribution, 210, 686, 748  
 tides, 581-585
- Atmosphere, composition of, 189
- Authigenic minerals in sediments, 1027  
 frequency of occurrence, 987
- Auxospores, 298
- B
- Bacteria:  
 aerobic, in sediments, 212, 996  
 anaerobic, in sediments, 212, 996  
 bottom deposits, effect on, 917-918  
 collection and analysis of, 383  
 denitrifying, 257  
 distribution in the sea, 918-920  
 importance in sedimentation, 995  
 importance to precipitation of iron  
 compounds, 1032  
 in the Black Sea, 871
- Bacteria (*Cont.*):  
 modes of life, 910, 913  
 autotrophic, 910  
 heterotrophic, 911  
 oxygen relations, 913, 917  
 nitrifying, 256  
 occurrence in sediments, 1016  
 possible role in petroleum formation,  
 996  
 structure and reproduction, 908-910  
 used to determine organic carbon, 249-  
 251  
 utilizers of dissolved organic matter,  
 911-913
- Baffin Bay:  
 bottom topography, 30  
 water masses, 663-665
- Baltic Sea, 657-658
- Barite concretions, 952, 1033
- Barium, 183
- Barnacles, reproduction of, 324, 326
- Barriers, faunal (*see* Zoogeography)
- Base-exchange in clay minerals, 988, 990  
 importance to flocculation, 958
- Basins, 23, 26  
 adjacent seas, 37, 38, 736, 738  
 sediments in, 1026, 1028  
 with inflow across the sill, 148, 149  
 with outflow across the sill, 147, 148
- Basin water, 147  
 plant nutrients, 246, 1028  
 stagnating, 1026, 1028
- Bathythermograph, 352
- Bay of Fundy:  
 tidal currents, 569  
 tides, 562, 563
- Beach:  
 deposits:  
 character, 1023  
 composition, 1022  
 texture, 1019-1023  
 relation to slope of beach, 1018  
 1019  
 equilibrium state, 44  
 terminology, 43, 44
- Benguela Current, 627-629
- Benthic environment and its subdivi-  
 sions, 275-278
- Benthic organisms, importance of to  
 texture of sediments, 997
- Benthos, 280  
 biological factors in the concentration  
 of, 907-908  
 collection of, 374-375  
 deep-sea, 805-810  
 littoral, 800-805  
 vertical distribution of, 806-807
- Bering Sea, 732, 733
- Bering Strait, currents of, 665, 723

Biocycles, 274  
 Biological factors influencing movements  
 and concentrations of organisms,  
 898-908  
 Bioluminescence, 300, 304, 814, 833-835  
 Biosphere, 274  
 Biotype, 279  
   facies of, 280  
   inhabitants of, 280, 879  
 Bipolarity, 849-850, 868  
 Birds dependent upon the sea, 313, 942  
 Bjerknæs' theorem of circulation, 460-462  
 Black Sea, 649-651  
   biology of, 871-872  
   lamination in sediments, 1040  
 Body fluids:  
   composition, 232, 270  
   osmotic relationships, 269, 272  
   control of, 271  
   relation to sea water, 269  
 Bolting cloth, 377, 378  
 Boric acid, influence of on alkalinity, 198,  
 199  
 Boron, 180  
 Bosphorus, currents of, 650  
 Bottom samplers, 344-347, 375  
 Bottom topography:  
   illustrated, 18, 30, 32, 34, 35  
   influence on currents, 466-469  
   large-scale features, 23, 27-30  
   maximum depths, 18, 19  
   nomenclature, 25-27  
   profiles, 17, 18  
   representation of, 16  
 Bottom water, formation of, 138, 139  
   Antarctic, 611, 612  
   Irminger Sea, 682, 683  
   Labrador Sea, 664  
   Mediterranean, 645, 646  
   Norwegian Sea, 656, 657  
 Bottom water, potential temperature of,  
 749  
 Bottom water of the oceans, 745-754  
 Boundary condition:  
   dynamic, 441  
   kinematic, 424  
 Boundary surface, slope of, 444  
 Boundary waves (*see* Internal waves)  
 Bowen ratio, 117  
 Brachiopoda synopsis, 308  
 Brandt's theory of phytoplankton  
 growth, 768, 784  
 Brazil Current, 623, 629  
 Bromine, 179  
 Browsing animals, 895-896  
 Bryozoa synopsis, 308  
 Buffer action of sea water, 195, 202  
   ecological importance, 268  
 By-the-wind sailer (*see* *Veleva*)

## C

*Calanus*:  
   abundance correlated with herring  
   catches, 906-907  
   abundance correlated with whale  
   catches, 905  
   biology of, in the Gulf of Maine, 864  
   feeding mechanism, 886-887  
   oxygen consumption by, 853, 870, 873  
   reproduction, 322-323, 903  
   vertical migrations, 836-837  
 Calcareous material in sediments (*see*  
*also* Calcium carbonate):  
   organisms contributing to, 950  
 Calcareous oozes (*see also* Pelagic sedi-  
 ments), 972  
   areas covered by, 975, 977, 978  
 Calcite, 998, 1027  
 Calcium, 178, 179  
   deposition by animals, 304-306, 853-  
   855  
   deposition by plants, 290, 301, 855  
 Calcium carbonate:  
   factors controlling organic precipita-  
   tion, 999, 1000  
   inorganic precipitation, 208, 998  
   percentage in sediments, 998-1008  
   as function of depth, 1004, 1005  
   distribution, 1002-1008  
   factors controlling, 1007, 1008  
   solubility, 205-208  
   solution near bottom, 1001  
   supply to sediments, 1000  
 California Current, 724-727  
   annual variation of temperature, 131,  
   132  
   comparison with Peru Current, 725  
   off Southern California, 454  
 Canyons:  
   sediments in, 1024, 1026  
   submarine:  
     character, 39-41  
     formation, 41, 42  
 Carbon, 179  
   cycle of, 916  
   in sediments, 1010, 1011  
   organic, 248-251  
   ratio to nitrogen, 1010  
 Carbon dioxide:  
   as a limiting factor, 768  
   as a measure of production, 768  
   distribution, 208-210  
   exchange with atmosphere, 203  
   importance to deposition of calcium  
   carbonate, 1000, 1001  
   methods of determination, 192, 193  
   partial pressure, 201-203  
   solubility, 190, 191, 202

- Carbon dioxide (*Cont.*):  
 system, 197-202  
 utilization of, by plants, 768
- Carbonic acid, dissociation constants of,  
 199, 204, 205
- Carbon-nitrogen-phosphorus ratio, 236,  
 237, 931
- Caribbean Sea:  
 bottom topography, 35  
 currents, 641, 642  
 oxygen content, 640  
 water masses, 638, 641
- Ceratium* (*see* Dinoflagellates)
- Chaetognatha:  
 as indicator species, 863  
 reproduction, 322  
 synopsis, 308
- "Challenger," dredging by, 805-807, 809
- Chemical transformations, importance  
 of to sediments, 952
- China Sea, 735
- Chitin, 289
- Chlorine, 175
- Chlorine-equivalent, 52
- Chlorinity, 51, 52  
 units for expressing, 51
- Chlorosity, 52  
 factors, 167
- Chordata, synopsis of, 312-314
- Circulation:  
 Bjerknes' theorem, 460-462  
 deep water, 745-755  
 thermal, 507-509  
 thermohaline, 509-510  
 transverse:  
   Antarctic Circumpolar Current, 618-  
   620  
   caused by upwelling, 501  
   Equatorial Countercurrent, 635, 636,  
   711  
   Gulf Stream, 676
- Circulation (water movements), bio-  
 logical significance of, 273-274
- Clay minerals, 988-990  
 base exchange, 988, 990  
 flocculation, 958, 990  
 groups of, 989  
 origin, 990
- Cl-ratio, 167
- Coccolith ooze, 973
- Coccolithophoridae, 301
- Coelenterata:  
 reproduction, 319-320  
 synopsis, 306
- Collection of:  
 bacteria, 383  
 benthos, 374  
 nekton, 376  
 plankton, 376-383
- Color of animals, 824-830  
 changes, 825-827  
 of deep-sea animals, 826-829  
 of surface oceanic animals, 827  
 protective, 826
- Color of sediments, 967-969  
 continental shelf, 1023  
 deep-sea, 978, 979
- Color of the sea, 88, 89
- Color of water, biological causes of, 289,  
 783-784
- Compensation depth, 779  
 in various areas, 780
- Compensation point, 778
- Composition of foraminiferal tests, 991
- Composition of marine organisms:  
 average, 230  
 body fluids, 232  
 concentration of elements, 233  
 elements reported, 228, 229  
 ratios O: C: N: P, 236, 237  
 skeletal material, 231
- Composition of river water, 214-216
- Composition of sea water, 165-174  
 constancy, 165-168  
 influenced by exchange with atmos-  
 phere, 212, 213  
 influenced by freezing, 216-219  
 influenced by rivers, 213-216  
 tables, 166, 173, 176, 177
- Composition of sediments, 971, 972
- Compressibility, 68
- Concentrations, 158  
 conservative, 158  
 non-conservative, 159  
 units for reporting, 169, 171
- Conductivity:  
 electrical, 71, 72  
 thermal (*see also* Eddy conductivity),  
 60, 61
- Continental shelf:  
 average inclination, 21  
 extension, 20, 21  
 formation, 24, 25, 1019  
 sediments on, 1018-1023
- Continental slope, inclination of, 22
- Continuity, equation of, 423-426  
 used for finding layer of no motion, 457
- Convergence, 419, 420  
 caused by winds, 500-503  
 regions of, 139, 140  
 vertical motion derived from, 425
- Copepoda (*see also* Calanus):  
 as food for fish, 892, 907  
 as food of whales, 905  
 as grazers, 772, 901  
 food of, 901  
 reproduction, 322, 323, 903  
 synopsis, 309

- Coral-reefs:  
 formation of, 854-855  
 organisms of, 855
- Corals:  
 reproduction of, 319  
 systematic position of, 306
- "Core method," 146
- Cores of sediments:  
 apparatus for obtaining, 345-347  
 compaction, 1037  
 relation between water content and  
 particle size, 994  
 stratification in, 1038, 1039
- Coring apparatus, 345-347
- Coriolis force, 433-438  
 importance to ocean currents, 390  
 importance to waves, 520
- Cotidal lines, 557  
 charts, 563  
 semi-diurnal tide of Atlantic Ocean,  
 581, 582
- Crinoidea:  
 bathymetric distribution, 807  
 synopsis, 312
- Ctenophora, 307, 320, 890
- Current meters, 366-373
- Currents (*see also* Circulation, Tidal cur-  
 rents, and Wind currents):  
 absolute, 455-457  
 accuracy of computed, 393, 394, 453-  
 455  
 computation, 391, 447-452  
 derived from ships' logs, 427, 428  
 derived from tongue-like distributions,  
 503-507  
 effect of bottom friction, 499, 500  
 effect of bottom topography, 466-469  
 Antarctic Circumpolar, 616  
 North Atlantic, 681  
 North Equatorial, Atlantic, 671, 672  
 importance to distribution of sedi-  
 ments, 965, 966, 1042, 1043  
 in stratified water, 444-447  
 related to the distribution of density,  
 389-395, 447-451  
 relative, 391, 442, 447-451  
 representations, 428-430  
 slope, 442, 458  
 sorting of shallow water sediments by,  
 1017-1019  
 transportation of particles along bot-  
 tom by, 959-966  
 transportation of settling particles by,  
 959  
 units used, 363  
 vertical convection, 510, 511  
 wave-like pattern in South Atlantic,  
 630
- Cyclic salt, 213, 214
- D
- Davidson Current, 725
- Dead water, 587
- Deeps, 20  
 of the oceans, 29
- Deep-sea anchoring, 361, 362
- Deep-sea benthos, 805-810  
 characteristics, 807  
 early discoveries, 805  
 food of, 808  
 horizontal distribution, 810
- Deep-sea environmental system, 275-276
- Deep water (*see also under specific  
 geographic regions*):  
 circulation, 745-755  
 formation, 138, 139
- Denmark Strait, flow through, 652-655
- Density, 56, 57  
 computation, 57  
 direct determinations, 53  
 general distribution, 137-140  
 maximum, 66, 68
- Density currents, 41
- Deposition of sediments (*see* Sedimen-  
 tation), 960
- Depth of frictional resistance, 396, 493
- "Desert quartz" in sediments, 955
- Detritus feeders and scavengers, 892-895
- Development of animals (*see also* Life  
 cycles):  
 direct, 318  
 indirect, 318  
 of deep-sea animals, 318
- Diatomaceous ooze, relation of to organic  
 production, 942
- Diatom ooze (*see* Pelagic sediments)
- Diatoms:  
 as primary producers, 287, 296  
 auxospores, 298, 763  
 control by grazing, 771-772, 901-902  
 geographical types, 791, 793  
 methods of flotation, 764-765  
 number in the open sea, 763  
 number of important planktonic spe-  
 cies, 762  
 nutrient absorption, 782-783  
 nutrient requirement, 768, 782-783  
 on whales, 299, 881  
 "persistent" culture of, 780  
 reproduction, 297-299  
 resting spores, 299, 762-763  
 sinking, 772, 781, 893  
 importance of viscosity, 794  
 structure, 295-297  
 systrophe in, 779, 781  
 temperature requirements, 770, 792-  
 794

- Diatoms (*Cont.*):  
 tychopelagic forms in the plankton, 762  
 Diffusion (*see also* Eddy diffusivity), 69  
 Dimensions used in mechanics, 400-402  
 Dinoflagellates:  
 distribution, 762  
 methods of flotation, 765-766  
 number of important species in the plankton, 762  
 nutritional requirements, 299, 385  
 rate of production, 790, 930  
 reproduction, 300  
 structure, 299-300  
 systematic position, 304  
 temperature requirements, 385, 762  
 Diurnal migrations, 836-839  
 Divergence, 420  
 caused by wind, 500-503  
 near Antarctic continent, 620  
 near the equator, 635, 711  
 regions of, 140  
 vertical motion derived from, 425  
 Dolomite, 952, 998, 1027  
 Dredge, 374, 375  
 Drift bottles, 364, 365  
 Drift of plants, 791-792  
 Dynamic computations, 392, 408-411  
 example, 411  
 Dynamic equilibrium, principle of, 160-163  
 Dynamic meter, 392, 403
- E
- Earth, size of, 9  
 Earthquake waves (*see also* Tsunamis), 543, 544  
 Earth's rotation:  
 angular velocity, 433  
 deflecting force, 390, 433-438  
 East Greenland Current, 659, 660  
 East Indian Archipelago, basins and waters of, 736-739  
 Echinodermata:  
 reproduction, 324, 325, 326  
 synopsis, 311-312  
 Echo sounding (*see also* Sonic soundings), 76  
 Ecological groups of animals (*see* Animal population)  
 Eddy conductivity, 92  
 computation from temperature observations, 135-137  
 Eddy conductivity of the air, 114  
 Eddy diffusion:  
 importance to transportation of sediments along bottom, 962-966  
 lateral, dispersal of suspended material by, 959  
 Eddy diffusivity, 93  
 effect of stability on, 476, 477  
 importance to tongue-like distributions, 504-507  
 lateral, 92, 93  
 importance to sedimentation, 959  
 importance to tongue-like distributions, 506, 507  
 numerical values, 483, 485  
 numerical values, 481, 483, 484  
 Eddy viscosity, 91, 473, 474  
 influence of stability on, 476  
 numerical values, 481, 482  
 related to lateral mixing, 474, 475  
 Antarctic Circumpolar Current, 621  
 Equatorial Countercurrent, 634  
 numerical values, 485  
 Eel grass:  
 as primary producer, 303, 893, 936-937  
 structure and reproduction, 302-303  
 Eels:  
 dispersal of larvae, 861-862  
 homoiosmotic condition, 271  
 migrations, 811  
 Ekman current meter, 367, 368  
 Ekman spiral, 493  
 Ekman water bottle, 354  
 Elasmobranchs, 312  
 osmotic pressure of body fluids, 271  
 Electric conductivity, 71, 72  
 Elements derived from earth's crust, 219-222  
 Elements present in marine organisms, 228, 229  
 concentration of, 233  
 Elements present in sea water, 174  
*table*, 176, 177  
 El Niño, 704, 705  
 effect on fauna, 274  
 Emerita:  
 dispersal of larvae, 859-860  
 feeding habits, 895  
 Endemic populations, maintenance of, 863-865  
 Energy equation, 441, 486  
 Environment, marine:  
 antiquity, 281-284  
 characteristics, 268  
 classification, 275-280  
 extent, 274  
 Environmental factors (*see* Light, Currents, Oxygen, Salinity, and Temperature)  
 Equatorial Countercurrent:  
 Atlantic, 633-637  
 Indian Ocean, 696  
 Pacific, 709-712  
 Equatorial currents (*see* North and South Equatorial Currents)

Equiscalar curves, 155  
 Equiscalar surfaces, 154, 155  
 Equivalent diameters of sedimentary debris, 958  
   compared to true dimensions, 982  
   statistical terms derived from, 970, 971  
   used for classifying sediments, 957, 974  
 Eroding velocity of ocean currents, 961  
 Erosion by currents, 41, 960-962  
 Euphausiids:  
   as food of whales, 904, 906-907  
   reproduction, 323  
   synopsis, 310  
 Euphotic zone, 774  
 Eurybathic animals, 806-807  
 Evaporation:  
   annual variation, 122  
   average annual, 120  
   computation of, 119, 120  
   diurnal variation, 122, 124  
   from the Black Sea, 650  
   from the Mediterranean Sea, 647  
   in different latitudes, 120, 121  
     *table*, 123  
   latent heat of, 62  
   observations of, 119  
   process of, 115-119  
 Extraterrestrial material in sediments, 952

## F

Faeroe-Shetland Channel, flow through, 652-655  
 Falkland Current, 628, 630  
 Faunal areas (*see* Zoogeography)  
 Feeding mechanisms, 886-898  
 Filter feeders, 377, 886-892  
   rate of filtering, 901-902, 930  
 Fishes (*see also under specific fishes*):  
   deep-sea fishes:  
     adaptations, 828-835, 897  
     food of, 896-897  
   dispersal of eggs and larvae, 861, 865  
   feeding habits, 884, 890, 892  
   migrations, 811  
   osmotic regulations, 271  
   reproduction, 325  
   synopsis, 312  
   visual depths, 831-833  
   year classes, 326-328  
 Floating adaptations:  
   in animals, 818, 821-823  
   in diatoms, 764-765  
   in dinoflagellates, 765-766  
 Flocculation of fine sediments, 958  
 Florida Current, 672, 673-675  
   compared with Kuroshio, 720

Fluorine, 180  
 Fog, advection, 118  
 Foraminifera:  
   in deep-sea sediments, 983-985  
   reproduction, 319  
   synopsis, 304-305  
 Foraminiferal number, 985  
 Foraminiferal tests, composition of, 991  
 Forel scale, 88  
 Freezing point of sea water, 65-67  
 Friction:  
   boundary, 478-481  
   general terms, 469, 470  
   simplified terms, 475  
 Frictional forces, 469  
   in presence of turbulence, 474-476  
 Frictional stresses (*see also* Wind stress), 68, 69  
   due to lateral turbulence, 474  
     Antarctic Circumpolar Current, 621  
     Equatorial Countercurrent, 634  
     importance to dynamics of ocean currents, 489  
   due to vertical turbulence, 471-474  
*Fucus*, 286, 291  
   reproduction, 293  
   zone, 277

## G

Geochemistry:  
   importance of sediments to, 947  
   of the ocean waters, 219-222  
 Geopotential, 403  
   anomaly, 409  
   topography, 404  
     illustrated, 454, 726  
     of isobaric surfaces, 412-413  
 Glacier ice (*see* Icebergs)  
 Glauconite, 1035, 1036  
   factors important to formation, 997  
   frequency of occurrence, 987  
 Globigerina ooze (*see* Pelagic sediments), 305  
 Gradient, 156  
 Grazers of the sea, 884-886, 901-903  
 Grazing as a control of diatoms, 901-902  
 Gulf of California, 730-732  
   lamination in sediments, 1040  
 Gulf of Mexico:  
   bottom topography, 35  
   currents, 642  
   oxygen content, 641  
   water masses, 639-642  
 Gulf Stream, 672, 675-680  
 Gulf Stream System, 672  
 Gulfweed (*see* *Sargassum*)

## H

- Halosphaera, 301, 302  
 Heat:  
   conducted through ocean bottom, 110  
   exchange, ocean-atmosphere, 114, 115  
     off Norwegian coast, 656  
   specific, 61, 62  
   transformed from kinetic energy, 110  
   transported by ocean currents, 99  
 Helium, 189  
 Herring, numbers correlated with copepods, 892, 906, 907  
 Histogram, 970, 980  
 Holoplankton:  
   characteristic types of, 816, 817  
   dispersal of, 862-863  
   numbers of species of, 868  
 Hydrogen-ion (*see* pH):  
   related to organisms, 268, 770  
 Hydrogen sulphide, 187  
   amounts in sea water, 189  
   at bottom of basins, 1028  
   exclusion of animals by, 871, 872  
   importance to precipitation of iron, 952, 1032  
   in Black Sea, 651, 917  
   in sediments, 995  
 Hydrometers, 53  
 Hypoplankton, 814  
 Hypsographic curve, 19

## I

- Ice (*see* Sea ice)  
 Icebergs:  
   in the Antarctic, 624, 625  
   in the Arctic, 667, 668  
   prediction of drift, 668  
   transporting sedimentary debris, 953, 1043  
 Indian Ocean:  
   boundaries, 11  
   currents, 695-697  
   oxygen distribution, 697, 698  
   water masses, 690-695  
 Indicator species, 791-792, 793, 847, 849, 862-863, 865-867  
 Individual population succession, 384  
 Individual time change, 157  
 Inertia, circle of, 437  
   motion in, 438, 439  
 Inorganic precipitates in sediments, 951, 952  
 Insects, 310  
 Insular shelf, formation of, 24  
 Internal waves, 586  
   comparison between theory and observations, 597-600

- Internal waves (*Cont.*):  
   currents associated with, 588-590, 594  
   effect of Corioli's force, 595, 596  
   effect on results of dynamic computation, 601, 602  
   importance to mixing, 601  
   long, 587  
   observations, 591-595  
   short, 586  
   standing, 600, 601  
   where density varies continuously, 589-591  
 Interstitial water, 995  
 Intertidal zone, 276  
   animals of, 276, 840, 844  
 Iodine, 183  
 Ionic activity, 203-205  
 Ionic product, 205  
   of calcium carbonate, 205-207, 999  
 Irminger Current, 682  
 Irminger Sea, water masses of, 682, 683  
 Iron, 183  
   as a limiting factor for diatoms, 769  
   in red clay, 1031, 1032  
   precipitation of, 952, 1031, 1032  
 Isentropic surfaces, 415, 416  
 Isobaric surfaces, 390, 440  
   absolute topography, 456, 457  
   inclination, 410-412, 440  
   relative topography, 412, 413, 452-455  
   illustrated, 454, 726  
 Isobaths, 16  
 Isotopes in sea water, 47, 49

## J

- Japan Current (*see* Kuroshio)  
 Japan Sea, 734, 735  
 Jellyfish (*see* Medusae)

## K

- Kelp, 287  
   habitats, 287, 291, 293  
   structure and reproduction, 292, 293  
 Knot, 363  
 Kuroshio, 719, 720, 721  
   annual variation of temperature, 131, 132  
   eddy conductivity derived from, 136, 137  
 Kuroshio Countercurrent, 719  
 Kuroshio Extension, 719, 721, 722  
 Kuroshio System, 719

## L

- Laboratories on board ship, 339, 340  
 Labrador Current, 665  
   meeting Gulf Stream, 682

Labrador Sea:  
 currents, 665, 666  
 water masses, 663-665  
 Laminar boundary layer, 479  
 Laminar flow, 89, 470  
 Laminarian zone, 277  
 Laminations in sediments:  
 deep sea, 1038, 1039  
 shallow water, 1039-1040  
 Larvae (*see* Zooplankton, temporary)  
 Lateral mixing (*see* Eddy viscosity and  
 Turbulence)  
 Law of parallel solenoids, 455  
 Layer of no motion, determination of,  
 456, 457  
 Level, reference, for depths, 10  
 Level surfaces, 390, 402  
 Liebig's law of the minimum, 768, 792  
 Life cycles of animals (*see also* Reproduc-  
 tion), 283, 319-322  
 field studies of, 322-323, 845-848, 862-  
 865  
 Life in the sea, development of, 281-284  
 Light:  
 related to animal ecology, 824-839,  
 851, 899  
 related to plant production, 774-776,  
 781-782  
*Limacina*, biological studies of, 384  
*Limnoria*, 310  
 food of, 896  
 reproduction, 317  
 Lithium, 182  
 Littoral system, 276-277  
 animals of, 800-805  
 horizontal distribution, 803-805  
 plants of, 286-295, 302  
 subdivisions, 275, 276, 286  
 Local change, 157  
 Local sequence, 384  
 Luminescence (*see* Bioluminescence)  
 Lunar hours, 548

M

Magnesium, 175  
 Mammalia:  
 reproduction, 326  
 synopsis, 313  
 Manganese, 184  
 in red clay, 1029, 1030  
 nodules and concretions, 952, 1028  
 Mechanical analysis of sediments, 958,  
 970  
 Mediterranean Sea:  
 bottom topography, 34  
 currents, 647, 648  
 formation of bottom water, 645  
 oxygen content, 648-650

Mediterranean Sea (*Cont.*):  
 plant nutrients, 245  
 water masses, 643-646  
 Mediterranean Water, spreading of, 670,  
 685, 686, 745  
 Medusae:  
 biological studies on, 320, 820  
 reproduction, 320  
 synopsis, 306  
 Meroplankton (*see* Zooplankton, tem-  
 porary)  
 Messengers, 354  
 Meter wheel, 338  
 Micro-plants, significance of, 883-884  
 Migrations:  
 eel, 811, 861-862  
 from land to sea, 283, 302  
 from sea to land, 284  
 salmon, 811  
 vertical, 835-839  
 whales, 811, 905  
 Mixing length, 472  
 near a boundary surface, 479  
 Mollusca:  
 reproduction of, 324  
 synopsis of, 310-311  
 Momentum, transport of, 472, 473  
 Mucus feeding, 889, 894  
 Mud flows, 960

## N

Nannoplankton, 819  
 Nansen water bottle, 353, 354  
 used for collecting phytoplankton, 382  
 Nathansohn's theory of plant nutrient  
 distribution, 784  
 Nekton, 281, 810-812  
 biological factors in movements of,  
 904-907  
 Nemertinea, synopsis of, 307  
 Neon, 189  
*Nereocystis*:  
 reproduction, 292  
 structure, 292  
 Neritic environmental province, 275,  
 279, 784  
 Nets, plankton, 376  
 catching power, 378-379  
 operation, 380  
 types, 379  
 Nitrate:  
 distribution in basins, 245  
 distribution in oceans, 241-243  
 related to deep-water circulation,  
 754  
 factors influencing distribution, 246  
 produced on sea bottom, 995  
 reduction and denitrification, 915

- Nitrate (*Cont.*):  
 regeneration, 254-257  
 seasonal variation, 252, 253  
 utilization as a measure of production, 932
- Nitrate-nitrogen, ratio to phosphate-phosphorus, 236, 243
- Nitrite:  
 distribution in oceans, 243  
 produced on sea bottom, 995
- Nitrogen, 181  
 compounds, utilization of by plants, 768  
   in sea water, 252-255  
   seasonal variation, 252  
   transformations, 253-255  
 dissolved:  
   amounts in sea water, 188  
   determination, 187  
   solubility, 188-191  
   in sediments, 1010, 1011
- Nitrogen cycle, 913-916  
 ammonification, 914  
 in the sea, 255-257  
 nitrification, 914  
 nitrogen assimilation, 915
- Nitrogen fixation, 916
- Nitrogen-phosphorus ratio in plankton, 236, 768
- Nitzschia closterium*, 296, 769  
 photosynthesis, 781, 933
- Noctiluca*, 304  
 reproduction, 319
- Normal Water, 51
- North Atlantic Current, 673, 680-683
- North Atlantic Ocean:  
 currents, 671-686  
 oxygen distribution, 686  
 water masses, 668-671
- North Equatorial Current:  
 Atlantic, 671  
 Indian Ocean, 696  
 Pacific, 708, 709, 718, 719
- North Pacific Current, 719, 722
- North Pacific Ocean:  
 currents, 718-728  
 eastern gyral, 723, 724  
 oxygen distribution, 728-730, 753  
 water masses, 712-718
- North Polar Sea:  
 bottom topography, 30-32  
 currents, 661  
 oxygen content, 662, 663  
 water masses, 658, 659
- North Sea:  
 currents, 660  
 water masses, 657
- Norwegian Current, 659, 660  
 fluctuations, 655, 661, 662
- Norwegian Sea:  
 bottom topography, 30-32  
 currents, 659  
 inflow of water, 652-656  
 outflow of water, 652-656  
 oxygen content, 662  
 water masses, 656, 657
- Nursery areas, 315
- Nutritional relationships, 882-898  
 micro-animals, significance of, 884-886  
 micro-plants, significance of, 883
- O
- Obelia*, 306  
 reproduction, 320
- Ocean currents, ecological relations of:  
 animals, 858-869  
 plants, 782-792
- Oceanic environmental province, 275, 278  
 animals, 821, 827  
 plants, 763
- Oceanographic vessels, 331-333
- Oceans:  
 areas, 13, 15  
 boundaries of subdivisions, 12  
 mean depths, 13, 15  
 volumes, 13, 15
- Oikopleura*:  
 feeding mechanism, 888  
 systematic position, 312
- Okhotsk Sea, 733
- Oozes, ecological importance of, 278
- Organic constituents in sediments, 949-951, 983-986
- Organic environment, 879
- Organic matter:  
 dissolved, utilization of, 911-913  
 in sediments, 951  
   chemical composition, 1010  
   decrease with depth in deposit, 1016  
   distribution, 1013-1017  
   factors determining amounts, 1012-1013  
   quantity, 1008-1010  
   sources, 951, 1011
- Organic production in the sea, 925-926  
 commercial, 936-937  
 cycle of organic matter in the sea, 926  
   in different regions, 937-944  
   phytoplankton, 927-934  
   zooplankton, 934-936
- Osmotic pressure, function of salinity and temperature, 66, 67
- Osmotic relationships of body fluids:  
 fresh-water animals, 269  
 marine animals, 269, 271, 839

- Oxidation-reduction potential, 211, 212  
 importance to accumulation of iron in sediments, 1032  
 importance to accumulation of manganese in sediments, 1031  
 in sediments, 995-997
- Oxygen:  
 as an environmental factor, 869-873, 903, 913, 917  
 in organic matter in sediments, 1011  
 production and consumption of, as index of organic production, 933-934  
 production by plants, 767, 777, 933
- Oxygen, dissolved:  
 depletion in interstitial water, 995  
 depletion in relation to nutrient content, 237  
 determination, 187  
 relation to pH distribution, 209  
 solubility, 189-191
- Oxygen consumption, bacterial, as a measure of organic carbon, 250
- Oxygen content (*see under specific geographic regions*):  
 oceanic deep-water, 746, 748, 752-754
- Oxygen distribution (*see under specific geographic regions*):  
 conditions for stationary, 161, 162  
 related to deep-water circulation, 754
- Oyashio, 721, 733  
 meeting Kuroshio Extension, 722
- Oysters, reproduction of, 316, 324, 846-847, 857
- P
- Pacific Ocean (*see also North Pacific and South Pacific*):  
 boundaries, 11  
 equatorial region, 706-712  
 currents, 708-712  
 oxygen content, 710, 711  
 phosphate, 710, 711  
 silicate, 710, 711  
 water masses, 706-708  
 oxygen distribution, 728-730, 753
- Palagonite, 1027  
 frequency of occurrence, 987
- Pelagic environment and its subdivisions 278
- Pelagic sediments (deposits), 972  
 areas covered by, 977  
 average percentage of calcium carbonate, 1006  
 chemical composition, 991, 992  
 classification, 972-973  
 color, 978, 979  
 content of organic matter, 1015
- Pelagic sediments (deposits) (*Cont.*):  
 depth range, 978  
 distribution, 974-978  
 inorganic constituents, 986-990  
 iron content, 992, 1030-1032  
 manganese content, 992, 1028-1031  
 minerals, 986-990  
 organic constituents, 983-986  
 phosphorus content, 992, 1032  
 radium content, 1034, 1035  
 rate of deposition, 1038, 1039  
 texture, 979-982
- Pendulum day, 437
- Permeability of sediments, 994
- Persian Gulf, 690
- Peru Current, 701-705  
 comparison with California Current, 703  
 organic production in, 942
- Petroleum formation in marine sediments, 947, 1009  
 possible role of bacteria, 996
- Pettersson-Nansen water bottle, 352
- Phaeocystis*, 301
- Phillipsite, 1027  
 frequency of occurrence, 987
- pH of sea water, 193  
 determination, 193, 194  
 distribution, 208-210  
 role in carbon dioxide system, 195-202
- Phosphate:  
 as a limiting factor, 768, 788  
 distribution:  
 factors influencing, 246, 247  
 in basins, 245, 246  
 in oceans, 239-241  
 related to deep-water circulation, 754  
 in South Atlantic, 786-788  
 regeneration, 260-261
